アプリケーション	Abreviews	特記事項
WB	★★★★★	Use a concentration of 1 µg/ml. Detects a band of approximately 150 kDa (predicted molecular weight: 131 kDa).

ターゲット情報

機能	Responsible for the deacetylation of lysine residues on the N-terminal part of the core histones (H2A, H2B, H3 and H4). Histone deacetylation gives a tag for epigenetic repression and plays an important role in transcriptional regulation, cell cycle progression and developmental events. Histone deacetylases act via the formation of large multiprotein complexes (By similarity). Plays a central role in microtubule-dependent cell motility via deacetylation of tubulin.
配列類似性	Belongs to the histone deacetylase family. HD type 2 subfamily. Contains 1 UBP-type zinc finger.
翻訳後修飾	Ubiquitinated. Its polyubiquitination however does not lead to its degradation. Sumoylated in vitro.
細胞内局在	Nucleus. Cytoplasm. It is mainly cytoplasmic, where it is associated with microtubules.
