アプリケーション

Our [Abpromise guarantee](#) covers the use of **ab31291** in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

アプリケーション	Abreviews	特記事項
ELISA		1/32000.
WB		Use a concentration of 0.1 - 0.3 µg/ml. Detects a band of approximately 38 kDa (predicted molecular weight: 38 kDa).
IHC-P		Use a concentration of 2 - 4 µg/ml. In paraffin embedded Human Kidney shows vesicular staining in the epithelial cells of the CT.

## ターゲット情報

<b>機能</b>	Probable FAD-dependent amine oxidase secreted by the kidney, which circulates in blood and modulates cardiac function and systemic blood pressure. Degrades catecholamines such as dopamine, norepinephrine and epinephrine in vitro. Lowers blood pressure in vivo by decreasing cardiac contractility and heart rate and preventing a compensatory increase in peripheral vascular tone, suggesting a causal link to the increased plasma catecholamine and heightened cardiovascular risk. High concentrations of catecholamines activate plasma renalase and promotes its secretion and synthesis (By similarity). According to PubMed:17385068, is unlikely that renalase has physiologically relevant catecholamine-oxidizing activity.
<b>組織特異性</b>	Secreted into the blood by the kidney. Highly expressed in the kidney, expressed at lower level in heart, skeletal muscle and small intestine. Its plasma concentration is markedly reduced in patients with end-stage renal disease, as compared with healthy subjects.
<b>配列類似性</b>	Belongs to the renalase family.
<b>細胞内局在</b>	Secreted.
