Optimal dilutions/concentrations should be determined by the end user.

ターゲット情報

関連性 SAPS2 is a regulatory subunit for the protein phosphatase-6 catalytic subunit (PPP6C). Protein phosphatase regulatory subunits, such as SAPS2, modulate the activity of protein phosphatase catalytic subunits by restricting substrate specificity, recruiting substrates, and determining the intracellular localization of the holoenzyme. It is ubiquitously expressed with strongest expression in the testis followed by liver, heart, kidney, brain and placenta. There are two named isoforms.
