## ターゲット情報

機能	May affect the structure or silencing of chromatin by phosphorylating HP1 gamma/CBX3. Isoform 2 promotes the G1/S transition of the cell cycle via up-regulation of CDK2 activity and phosphorylation of CDKN1B, resulting in enhanced nuclear export and proteasome-dependent degradation of CDKN1B. Isoform 2 also represses CDKN1B transcription by phosphorylating and inactivating the transcription factor FOXO3. Plays a role in signal transduction in blood cells. Contributes to both cell proliferation and survival and thus provides a selective advantage in tumorigenesis.
組織特異性	Expressed primarily in cells of the hematopoietic and germline lineages. Isoform 1 and isoform 2 are both expressed in prostate cancer cell lines.
配列類似性	Belongs to the protein kinase superfamily, CAMK Ser/Thr protein kinase family, PIM subfamily. Contains 1 protein kinase domain.
翻訳後修飾	Autophosphorylated on both serine/threonine and tyrosine residues.
細胞内局在	Cytoplasm. Nucleus and Cell membrane.
