ターゲット情報

関連性 This 140 kDa protein is the second largest subunit of RNA polymerase II, the polymerase responsible for synthesizing messenger RNA in eukaryotes. This subunit, in combination with at least two other polymerase subunits, forms a structure within the polymerase that maintains contact in the active site of the enzyme between the DNA template and the newly synthesized RNA. It is suggested that Rpb2 plays a role in enhancing transcription from prostate specific antigen genes. These genes may be linked to prostate cancer progression.
