## ターゲット情報

機能	In adipose tissue and heart, it primarily hydrolyzes stored triglycerides to free fatty acids, while in steroidogenic tissues, it principally converts cholesteryl esters to free cholesterol for steroid hormone production.
パスウェイ	Glycerolipid metabolism; triacylglycerol degradation.
配列類似性	Belongs to the 'GDYG' lipolytic enzyme family.
細胞内局在	Cell membrane. Membrane > caveola. Cytoplasm > cytosol. Found in the high-density caveolae. Translocates to the cytoplasm from the caveolae upon insulin stimulation.
