追加情報

ELISA: 1/1000.

WB: 1/50 - 1/100. Predicted molecular weight: 60 kDa.

Not yet tested in other applications.

Optimal dilutions/concentrations should be determined by the end user.

ターゲット情報**機能**

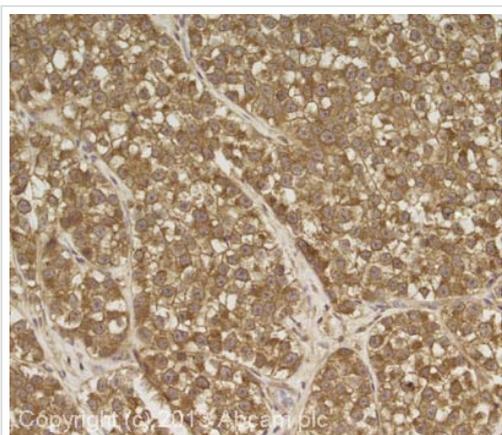

Molecular chaperone; assists the folding of proteins upon ATP hydrolysis. As part of the BBS/CCT complex may play a role in the assembly of BBSome, a complex involved in ciliogenesis regulating transports vesicles to the cilia. Known to play a role, in vitro, in the folding of actin and tubulin.

配列類似性

Belongs to the TCP-1 chaperonin family.

細胞内局在

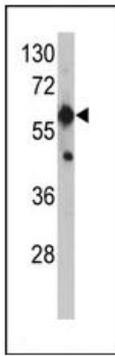

Cytoplasm. Cytoplasm > cytoskeleton > centrosome.

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) - Anti-TCP1 alpha antibody - C-terminal (ab91232)

IHC image of TCP1 staining in human testis seminoma formalin fixed paraffin embedded tissue section, performed on a Leica Bond system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab91232, 1µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

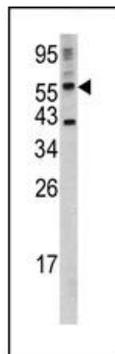

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
