ターゲット情報

機能	Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells.
関連疾患	Defects in ACTA2 are the cause of aortic aneurysm familial thoracic type 6 (AAT6) [MIM:611788]. AATs are characterized by permanent dilation of the thoracic aorta usually due to degenerative changes in the aortic wall. They are primarily associated with a characteristic histologic appearance known as 'medial necrosis' or 'Erdheim cystic medial necrosis' in which there is degeneration and fragmentation of elastic fibers, loss of smooth muscle cells, and an accumulation of basophilic ground substance.
配列類似性	Belongs to the actin family.
細胞内局在	Cytoplasm > cytoskeleton.

ab15734 staining alpha smooth muscle Actin in Horse trachealis muscle tissue by Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded tissue sections). The sections were fixed in ethanol prior to blocking with 10% BSA for 1 hour at 21°C. The primary antibody was diluted 1/100 and incubated with the sample for 12 hours at 4°C. An EXPOSE Polyvalent HRP/DAB detection kit (ab80436) was used for detection.
