製品の概要 Protein-DNA interactions play a critical role for cellular functions such as signal transduction, gene

transcription and epigenetic silencing. Identifying the genetic targets of DNA binding proteins and knowing the mechanishm of protein-DNA interaction is important for understanding cellular

processes.

DNA-Protein Binding Assay Kit (Fluorometric) (ab117140) allows the user to investigate direct *in vitro* protein-DNA interaction, using dsDNA of choice, within 3 hours. <u>ab117139</u> is specifically suitable for detection of transcription factor activation in mammalian tissue and cell extracts.
