製品の概要 Abcam's PLGF Human ELISA (Enzyme-Linked Immunosorbent Assay) kit is an *in vitro* enzyme-

linked immunosorbent assay for the quantitative measurement of Human PLGF in serum, plasma,

and cell culture supernatants.

This assay employs an antibody specific for Human PLGF coated on a 96-well plate. Standards and samples are pipetted into the wells and PLGF present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-Human PLGF antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of PGF bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.

特記事項 Optimization may be required with urine samples.

機能 Growth factor active in angiogenesis and endothelial cell growth, stimulating their proliferation and

migration. It binds to the receptor FLT1/VEGFR-1. Isoform PIGF-2 binds NRP1/neuropilin-1 and

NRP2/neuropilin-2 in a heparin-dependent manner.

組織特異性 While the three isoforms are present in most placental tissues, PIGF-2 is specific to early (8

week) placenta and only PIGF-1 is found in the colon and mammary carcinomas.

配列類似性 Belongs to the PDGF/VEGF growth factor family.

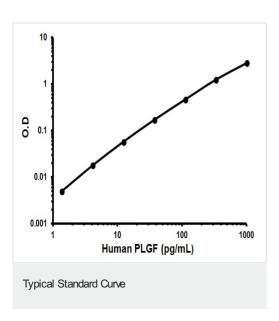

ドメイン Isoform PIGF-2 contains a basic insert which acts as a cell retention signal.

翻訳後修飾 N-glycosylated.

細胞内局在 Secreted. The three isoforms are secreted but PIGF-2 appears to remain cell attached unless

released by heparin.
