Abcam's IL-1ra Mouse ELISA (Enzyme-Linked Immunosorbent Assay) kit is an *in vitro* enzyme-

linked immunosorbent assay for the quantitative measurement of IL-1ra in serum, plasma (collect plasma using EDTA and heparin as an anticoagulant. Citrate is not recommended for this assay)

and cell culture supernates.

This assay employs an antibody specific for mouse IL-1ra coated on a 96-well plate. Standards and samples are pipetted into the wells and IL-1ra present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-mouse IL-1ra antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of IL-1ra bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.

機能 Inhibits the activity of interleukin-1 by binding to receptor IL1R1 and preventing its association with

the coreceptor IL1RAP for signaling. Has no interleukin-1 like activity. Binds functional interleukin-1 receptor IL1R1 with greater affinity than decoy receptor IL1R2; however, the physiological

relevance of the latter association is unsure.

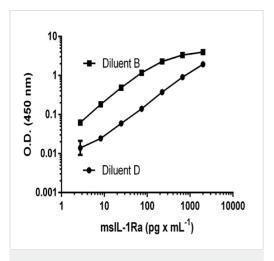

組織特異性 The intracellular form of IL1RN is predominantly expressed in epithelial cells.

**関連疾患** Microvascular complications of diabetes 4

Interleukin 1 receptor antagonist deficiency

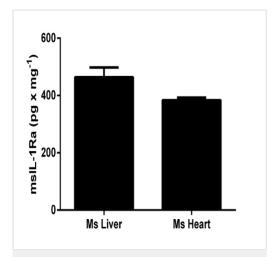

**細胞内局在** Cytoplasm and Secreted.
