製品の概要 Abcam's ANP (NPPA) Rat in vitro ELISA (Enzyme-Linked Immunosorbent Assay) kit is designed

for the quantitative measurement of ANP concentrations in cell culture supernatants, tissue-

extract, serum and plasma.

An ANP specific antibody has been precoated onto 96-well plates and blocked. Standards or test samples are added to the wells and subsequently an ANP specific biotinylated detection antibody is added and then followed by washing with wash buffer. Streptavidin-Peroxidase Conjugate is added and unbound conjugates are washed away with wash buffer. TMB is then used to visualize Streptavidin-Peroxidase enzymatic reaction. TMB is catalyzed by Streptavidin-Peroxidase to produce a blue color product that changes into yellow after adding acidic stop solution. The

1

density of yellow coloration is directly proportional to the amount of ANP captured in plate.

The entire kit may be stored at -20°C for long term storage before reconstitution - Avoid repeated freeze-thaw cycles.

機能 Hormone playing a key role in cardiovascular homeostasis through regulation of natriuresis,

diuresis, and vasodilation. Also plays a role in female pregnancy by promoting trophoblast invasion and spiral artery remodeling in uterus. Specifically binds and stimulates the cGMP

production of the NPR1 receptor. Binds the clearance receptor NPR3.

**関連疾患** Atrial standstill 2

Atrial fibrillation, familial, 6

**配列類似性** Belongs to the natriuretic peptide family.

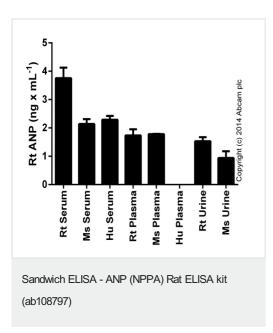

翻訳後修飾 Cleaved by CORIN upon secretion to produce the functional hormone.

Atrial natriuretic factor: Cleaved by MME. The cleavage initiates degradation of the factor and

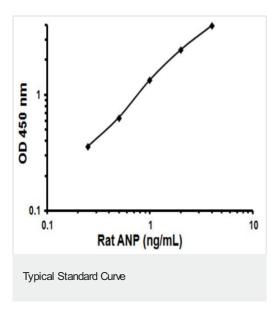

thereby regulate its activity.

細胞内局在 Secreted.
