### 関連性

Measles virus belongs to the Paramyxoviridae family within the Mononegavirales order. Measles phosphoprotein is an essential component of the RNA polymerase and the nascent chain assembly complex. The non-segmented, single stranded, negative sense RNA genome of the virus is encapsidated by the nucleoprotein (N) to form a helical nucleocapsid. This ribonucleoproteic complex is the substrate for both transcription and replication. The RNA-dependent RNA polymerase binds to the nucleocapsid template via its co-factor, the phosphoprotein (P).
