## ターゲット情報

### 機能

Scaffold protein which mediates the formation of the PTW/PP1 phosphatase complex by providing a binding platform to each component of the complex. The PTW/PP1 phosphatase complex plays a role in the control of chromatin structure and cell cycle progression during the transition from mitosis into interphase. Mediates interaction of WDR82 and PPP1CA. Inhibitor of PPP1CA and PPP1CC phosphatase activities. Has inhibitory activity on PPP1CA only when phosphorylated. Binds to mRNA, single-stranded DNA (ssDNA), poly(A) and poly(G) homopolymers.

### 組織特異性

Expressed in heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.

### 配列類似性

Contains 1 C3H1-type zinc finger.  
Contains 1 TFIIIS N-terminal domain.

### 翻訳後修飾

Phosphorylated on Ser-398 by PKA within the region necessary for interaction with PPP1CA.

### 細胞内局在

Nucleus. Found in discrete nucleoplasmic bodies and within nucleoli. Associates with chromatin during interphase, excluded from condensed chromosomes during early mitosis and is reloaded onto chromosomes at the late telophase (By similarity).
