#### 製品の概要

製品名 Anti-TATA binding protein TBP antibody - Nuclear Loading Control and ChIP Grade

製品の詳細 Rabbit polyclonal to TATA binding protein TBP - Nuclear Loading Control and ChIP Grade

由来種 Rabbit

アプリケーション 適用あり: IP, ICC/IF, ChIP, IHC-P, WB

種交差性 交差種: Mouse, Rat, Human

交差が予測される動物種: Chicken, Cow 4

免疫原 Synthetic peptide. This information is proprietary to Abcam and/or its suppliers.

特記事項
The Life Colones industry has been in the prince of a reproducibility pricio for a purple or set.

Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets

アプリケーション	Abreviews	特記事項
IP		Use at an assay dependent concentration.
ICC/IF	<b>★★★★★</b> (2)	Use at an assay dependent concentration.
ChIP		Use 5 µg for 25 µg of chromatin.
IHC-P	**** <u>(1)</u>	Use a concentration of 10 μg/ml.
WB	★★★★☆ (3)	Use a concentration of 1 µg/ml. Detects a band of approximately 45 kDa (predicted molecular weight: 38 kDa).

機能

General transcription factor that functions at the core of the DNA-binding multiprotein factor TFIID. Binding of TFIID to the TATA box is the initial transcriptional step of the pre-initiation complex (PIC), playing a role in the activation of eukaryotic genes transcribed by RNA polymerase II. Component of the transcription factor SL1/TIF-IB complex, which is involved in the assembly of the PIC (preinitiation complex) during RNA polymerase I-dependent transcription. The rate of PIC formation probably is primarily dependent on the rate of association of SL1 with the rDNA promoter. SL1 is involved in stabilization of nucleolar transcription factor 1/UBTF on rDNA.

組織特異性

関連疾患

Widely expressed, with levels highest in the testis and ovary.

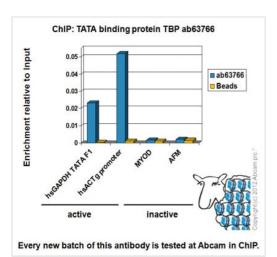

Defects in TBP are the cause of spinocerebellar ataxia type 17 (SCA17) [MIM:607136]. Spinocerebellar ataxia is a clinically and genetically heterogeneous group of cerebellar disorders. Patients show progressive incoordination of gait and often poor coordination of hands, speech and eye movements, due to degeneration of the cerebellum with variable involvement of the brainstem and spinal cord. SCA17 is an autosomal dominant cerebellar ataxia (ADCA) characterized by widespread cerebral and cerebellar atrophy, dementia and extrapyramidal signs. The molecular defect in SCA17 is the expansion of a CAG repeat in the coding region of TBP. Longer expansions result in earlier onset and more severe clinical manifestations of the

disease.

**配列類似性** Belongs to the TBP family.

ChIP - Anti-TATA binding protein TBP antibody - Nuclear Loading Control and ChIP Grade (ab63766)

Chromatin was prepared from HeLa cells according to the Abcam X-ChIP protocol. Cells were fixed with formaldehyde for 10 minutes. The ChIP was performed with 25µg of chromatin, 5µg of ab63766 (blue), and 20µl of Protein A/G sepharose beads. No antibody was added to the beads control (yellow). The immunoprecipitated DNA was quantified by real time PCR (Sybr green approach for active loci and Taqman approach for inactive loci). Primers and probes are located in the first kb of the transcribed region.

ab63766 staining TAT binding protein TBP in human infantile fibromatosis tissue sections by Immunohistochemistry (IHC-P - paraformaldehyde-fixed, paraffin-embedded sections). Tissue was fixed with formaldehyde and blocked with 1% FBS/BSA for 3 hours at room temperature; antigen retrieval was by heat mediation in Tris pH9. Samples were incubated with primary antibody (1/100 in TBS + 1% BSA + 1% FBS) for 16 hours. An undiluted HRP-conjugated goat anti-rabbit IgG polyclonal was used as the secondary antibody.

Immunoprecipitation - Anti-TATA binding protein TBP antibody - Nuclear Loading Control and ChIP Grade (ab63766)

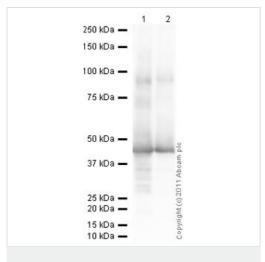

TATA binding protein TBP was immunoprecipitated using 0.5mg HepG2 whole cell extract, 5µg of Rabbit polyclonal to TATA binding protein TBP and 50µl of protein G magnetic beads (+). No antibody was added to the control (-).

The antibody was incubated under agitation with Protein G beads for 10min, HepG2 whole cell extract lysate diluted in RIPA buffer was added to each sample and incubated for a further 10min under agitation.

Proteins were eluted by addition of  $40\mu$ I SDS loading buffer and incubated for 10min at  $70^{\circ}$ C;  $10\mu$ I of each sample was separated on a SDS PAGE gel, transferred to a nitrocellulose membrane, blocked with 5% BSA and probed with ab63766.

Secondary: Mouse monoclonal [SB62a] Secondary Antibody to Rabbit lgG light chain (HRP) (ab99697).

TBP antibody - Nuclear Loading Control and ChIP
Grade (ab63766)

IHC image of TATA binding protein TBP staining in Human breast ductal carcinoma formalin fixed paraffin embedded tissue section, performed on a Leica BondTM system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab63766, 10µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
