Product datasheet

Anti-TCR gamma + TCR delta antibody [UC7-13D5] ab25252

製品の概要

製品名 Anti-TCR gamma + TCR delta antibody [UC7-13D5]

製品の詳細 Armenian Hamster monoclonal [UC7-13D5] to TCR gamma + TCR delta

由来種 Armenian hamster

特異性 This antibody does not react with alpha-beta TCR expressing cells.

アプリケーション 適用あり: Flow Cyt, ICC, IP, IHC-Fr

種交差性 交差種: Mouse

免疫原 Tissue, cells or virus corresponding to TCR gamma + TCR delta. Mouse T cell clone G8

特記事項

This antibody has been shown to be useful in studies of in vitro activation of gamma-delta TCR bearing cells and in vitro depletion of gamma-delta TCR expressing cells.

bearing cells and in vitro depletion of gamma-delta. TCR expressing cells.

The Life Science industry has been in the grips of a reproducibility crisis for a number of years. Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets your needs before purchasing.

If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. Recommended alternatives for this product can be found below, along with publications, customer reviews and Q&As

製品の特性

製品の状態 Liquic

保存方法 Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C long

term. Avoid freeze / thaw cycle.

バッファー pH: 8.20

Constituent: 100% Borate buffered saline

精製度 Affinity purified

一次抗体 備考 This antibody has been shown to be useful in studies of in vitro activation of gamma-delta TCR

bearing cells and in vitro depletion of gamma-delta TCR expressing cells.

ポリ/モノ モノクローナル

クローン名 UC7-13D5

アイソタイプ lgG

アプリケーション

The Abpromise guarantee <u>Abpromise保証は、</u>次のテスト済みアプリケーションにおけるab25252の使用に適用されます アプリケーションノートには、推奨の開始希釈率がありますが、適切な希釈率につきましてはご検討ください。

アプリケーション	Abreviews	特記事項
Flow Cyt		Use 1µg for 10 ⁶ cells.
ICC		Use at an assay dependent concentration.
IP		Use at an assay dependent concentration.
IHC-Fr		Use at an assay dependent concentration.

関連性

T cell receptors (TCR) recognize foreign antigens which have been processed as small peptides and bound to major histocompatibility complex (MHC) molecules at the surface of antigen presenting cells (APC). Each T cell receptor is a dimer consisting of one α and one β chain or one δ and one γ chain. This region represents the germline organization of the T cell receptor beta locus. The beta locus includes V (variable), J (joining), diversity (D), and C (constant) segments. During T cell development, the beta chain is synthesized by a recombination event at the DNA level joining a D segment with a J segment; a V segment is then joined to the D-J gene. The C segment is later joined by splicing at the RNA level. The γ/δ TCR associates with CD3 and is expressed on a T cell subset found in the thymus, the intestinal epithelium, and the peripheral lymphoid tissues and peritoneum. Most γ/δ T cells are CD4-/CD8-, some are CD8+. T cells expressing the γ/δ TCR have been shown to play a role in oral tolerance, tumor-associated tolerance, and autoimmune disease.

細胞内局在

Type I membrane protein

Our Abpromise to you: Quality guaranteed and expert technical support

- · Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.co.jp/abpromise or contact our technical team.

Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
