由来種	Mouse
アプリケーション	適用あり: WB, ICC/IF
種交差性	交差種: <i>Saccharomyces cerevisiae</i>
免疫原	Full length native protein (purified). This information is considered to be commercially sensitive.
特記事項	<p>This IgG2a kappa isotype control monoclonal antibody was raised in mouse against a yeast-specific protein, V-ATPase subunit (the product of VPH1 gene). It is a suitable isotype control for mammalian species.</p> <p>Isotype controls are used to confirm that the primary antibody binding is specific and not a result of non-specific Fc receptor binding or other protein interactions. The isotype control antibody should match the primary antibody's host species, isotype, and possible conjugation.</p> <p>This antibody clone is manufactured by Abcam. If you require a custom buffer formulation or conjugation for your experiments, please contact orders@abcam.com.</p> <p>The Life Science industry has been in the grips of a reproducibility crisis for a number of years. Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets your needs before purchasing.</p> <p>If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. アプリケーション	Abreviews	特記事項
WB	★★★★★ (1)	Use a concentration of 0.25 - 1 µg/ml. Detects a band of approximately 95 kDa (predicted molecular weight: 95 kDa).
ICC/IF		Use a concentration of 20 µg/ml. Heat induced antigen retrieval recommended.

ターゲット情報

機能	Subunit of the integral membrane V0 complex of vacuolar ATPase essential for assembly and catalytic activity. Is present only in vacuolar V-ATPase complexes. Enzymes containing this subunit have a 4-fold higher ratio of proton transport to ATP hydrolysis than complexes containing the Golgi/endosomal isoform and undergo reversible dissociation of V1 and V0 in response to glucose depletion. V-ATPase is responsible for acidifying a variety of intracellular compartments in eukaryotic cells.
配列類似性	Belongs to the V-ATPase 116 kDa subunit family.
翻訳後修飾	Glycosylated.
細胞内局在	Vacuole membrane.
