

## Product datasheet

# Anti-Cytochrome C antibody ab49879

★★★★☆ 1 Abreviews 2 References 画像数 1

### 製品の概要

製品名	Anti-Cytochrome C antibody
製品の詳細	Sheep polyclonal to Cytochrome C
由来種	Sheep
アプリケーション	適用あり: WB, IHC-P, ICC/IF
種交差性	交差種: Rat, Rabbit, Dog, Human
免疫原	Full length native protein (purified) (Rabbit) conjugated to KLH
ポジティブ・コントロール	Human heart tissue, whole extracts of MCF 7, Jurkat, Rat 1, and MDCK cells.

### 製品の特性

製品の状態	Liquid
保存方法	Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.
バッファー	pH: 7.40 Preservative: 0.097% Sodium azide Constituents: 0.0268% PBS, 1% BSA
ポリモノ	ポリクローナル
アイソタイプ	IgG

### アプリケーション

Our [Abpromise guarantee](#) covers the use of **ab49879** in the following tested applications.

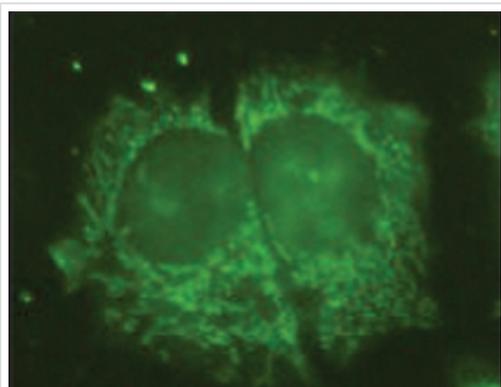

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

アプリケーション	Abreviews	特記事項
WB	★★★★☆	Use a concentration of 0.1 - 0.2 µg/ml. Predicted molecular weight: 11 kDa.
IHC-P		Use a concentration of 20 - 40 µg/ml.
ICC/IF		Use a concentration of 5 - 10 µg/ml.

## ターゲット情報

機能	<p>Electron carrier protein. The oxidized form of the cytochrome c heme group can accept an electron from the heme group of the cytochrome c1 subunit of cytochrome reductase. Cytochrome c then transfers this electron to the cytochrome oxidase complex, the final protein carrier in the mitochondrial electron-transport chain.</p> <p>Plays a role in apoptosis. Suppression of the anti-apoptotic members or activation of the pro-apoptotic members of the Bcl-2 family leads to altered mitochondrial membrane permeability resulting in release of cytochrome c into the cytosol. Binding of cytochrome c to Apaf-1 triggers the activation of caspase-9, which then accelerates apoptosis by activating other caspases.</p>
関連疾患	<p>Defects in CYCS are the cause of thrombocytopenia type 4 (THC4) [MIM:612004]; also known as autosomal dominant thrombocytopenia type 4. Thrombocytopenia is the presence of relatively few platelets in blood. THC4 is a non-syndromic form of thrombocytopenia. Clinical manifestations of thrombocytopenia are absent or mild. THC4 may be caused by dysregulated platelet formation.</p>
配列類似性	<p>Belongs to the cytochrome c family.</p>
翻訳後修飾	<p>Binds 1 heme group per subunit.</p>
細胞内局在	<p>Mitochondrion matrix.</p>

## 画像

Immunocytochemistry/ Immunofluorescence - Anti-Cytochrome C antibody (ab49879)

ab49879 at 5 µg/ml staining Human MCF-7 cells. Cells were fixed and permeabilized with 3% paraformaldehyde followed by 0.5% TritonX-100 and visualised with Rabbit anti-Sheep IgG, FITC conjugate.

**Please note:** All products are "FOR RESEARCH USE ONLY AND ARE NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE"

## Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise,

please visit <https://www.abcam.co.jp/abpromise> or contact our technical team.

## **Terms and conditions**

---

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
