Functional Studies - NBQX disodium salt, AMPA /  
kainate antagonist (ab120046)

**ab96379** staining MEK1 (phospho S298) in SK-N-SH cells treated with NBQX disodium salt (ab120046), by ICC/IF. Decrease in MEK1 (phospho S298) expression correlates with increased concentration of NBQX disodium salt, as described in literature. The cells were incubated at 37°C for 24h in media containing different concentrations of ab120046 (NBQX disodium salt) in DMSO, fixed with 4% formaldehyde for 10 minutes at room temperature and blocked with PBS containing 10% goat serum, 0.3 M glycine, 1% BSA and 0.1% tween for 2h at room temperature. Staining of the treated cells with **ab96379** (1/100 dilution) was performed overnight at 4°C in PBS containing 1% BSA and 0.1% tween. A DyLight 488 goat anti-rabbit polyclonal antibody (**ab96899**) at 1/250 dilution was used as the secondary antibody.
