Anti-GRK1 antibody [D11] ab2776

5 References 画像数 4

製品の概要

製品名 Anti-GRK1 antibody [D11]

製品の詳細 Mouse monoclonal [D11] to GRK1

由来種 Mouse

特異性 Detects G-protein-associated rhodopsin kinase 1a/b (GRK1a/b) from human and bovine tissues.

This antibody does not cross-react with other G protein-coupled kinases.

アプリケーション 適用あり: ICC/IF

種交差性 交差種: Mouse, Cow, Human

免疫原 Full length native protein (purified) corresponding to Human GRK1.

エピトープ This antibody recognizes an N-terminal epitope of human GRK1 which is conserved in both

GRK1a and GRK1b.

特記事項The Life Science industry has been in the grips of a reproducibility crisis for a number of years.

Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets

your needs before purchasing.

If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. Recommended alternatives for this product can be

found below, along with publications, customer reviews and Q&As

製品の特性

製品の状態 Liquid

保存方法 Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -

80°C. Avoid freeze / thaw cycle.

ארע"ד Preservative: 0.05% Sodium azide

精製度 Protein G purified

一次抗体 備考 The sensation of sight is the result of a cascade of events starting with the interaction of

photoactivated rhodopsin with a protein called transducin. Rhodopsin kinase is a G-protein-coupled Ser/Thr kinase, also known as GRK1, which is a key element in the regulation of this cascade. Following phosphorylation by GRK1, arrestin is recruited to phospho-rhodopsin quenching its phototransductive activity by preventing further interaction with transducin. By breaking the cycle of phototransduction, GRK1 plays an important role in the restoration of the

1

system for subsequent visual events.

ポリ/モノ モノクローナル

クローン名 D11 **アイソタイプ** IgG

アプリケーション

The Abpromise guarantee <u>Abpromise保証は、</u>次のテスト済みアプリケーションにおけるab2776の使用に適用されます アプリケーションノートには、推奨の開始希釈率がありますが、適切な希釈率につきましてはご検討ください。

アプリケーション	Abreviews	特記事項
ICC/IF		1/20 - 1/200.

ターゲット情報

機能 Retina-specific kinase involved in the signal turnoff via phosphorylation of rhodopsin (RHO), the G

protein- coupled receptor that initiates the phototransduction cascade. This rapid desensitization

is essential for scotopic vision and permits rapid adaptation to changes in illumination.

組織特異性 Retinal-specific. Expressed in rods and cones cells.

関連疾患 Night blindness, congenital stationary, Oguchi type 2

配列類似性 Belongs to the protein kinase superfamily. AGC Ser/Thr protein kinase family. GPRK subfamily.

Contains 1 AGC-kinase C-terminal domain.

Contains 1 protein kinase domain.

Contains 1 RGS domain.

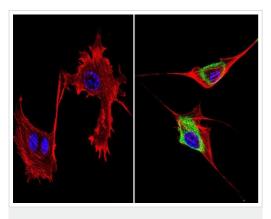

翻訳後修飾 Autophosphorylated, Ser-21 is a minor site of autophosphorylation compared to Ser-491 and Thr-

492 (By similarity). Phosphorylation at Ser-21 is regulated by light and activated by cAMP.

Farnesylation is required for full activity.

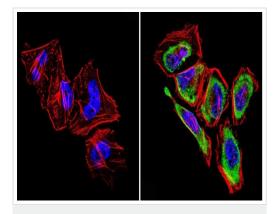

細胞内局在 Membrane.

Immunocytochemistry/ Immunofluorescence - Anti-GRK1 antibody [D11] (ab2776)

Immunocytochemistry/Immunofluorescence analysis of GRK1 (green) in murine cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes at room temperature and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were incubated with ab2776 (1:200) overnight in a humidified chamber. Cells were washed with PBST and incubated with a DyLight-conjugated secondary antibody for 45 minutes at room temperature in the dark. F-actin (red) was stained with a fluorescent phalloidin and nuclei (blue) were stained with DAPI. Images were taken at a 60X magnification.

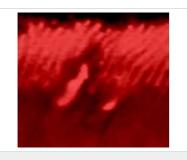

Immunocytochemistry/ Immunofluorescence - Anti-GRK1 antibody [D11] (ab2776)

Immunocytochemistry/Immunofluorescence analysis of GRK1 (green) in Hela cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes at room temperature and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were incubated with ab2776 (1:200) overnight in a humidified chamber. Cells were washed with PBST and incubated with a DyLight-conjugated secondary antibody for 45 minutes at room temperature in the dark. F-actin (red) was stained with a fluorescent phalloidin and nuclei (blue) were stained with DAPI. Images were taken at a 60X magnification.

Immunolocalization of GRK1 in bovine retina using ab2776.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.co.jp/abpromise or contact our technical team.

Terms and conditions

· Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
