## ターゲット情報

<b>機能</b>	Produces nitric oxide (NO) which is a messenger molecule with diverse functions throughout the body. In macrophages, NO mediates tumoricidal and bactericidal actions. Also has nitrosylase activity and mediates cysteine S-nitrosylation of cytoplasmic target proteins such COX2.
<b>組織特異性</b>	Expressed in the liver, retina, bone cells and airway epithelial cells of the lung. Not expressed in the platelets.
<b>配列類似性</b>	Belongs to the NOS family. Contains 1 FAD-binding FR-type domain. Contains 1 flavodoxin-like domain.

Using 4-20% Tris-Glycine polyacrylamide gel and transferred to a nitrocellulose membrane, blocked with 5% Milk in TBST for at least 1 hour. The membrane was probed with ab3523 at 4°C overnight on a rocking platform, washed in TBST, and probed with the secondary antibody for 1 hour.

### Secondary

**All lanes :** Goat anti-Rabbit IgG (Heavy Chain) Superclonal™ Recombinant Secondary Antibody, HRP at 1/4000 dilution

**Predicted band size:** 131 kDa

This was run using 4-12% Bis-Tris Protein Gel and a Nitrocellulose membrane.

Observed band at 130kDa in LPS treated RAW 264.7 cells, and an uncharacterized band at ~60kDa.

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) - Anti-iNOS antibody (ab3523)

Immunohistochemistry analysis of human heart tissue stained for iNOS without (negative control) or using ab3523 at 1/200 dilution overnight at 4°C in a humidified chamber, followed biotin-conjugated secondary antibody and SA-HRP, followed by colorimetric detection using DAB. Tissues were counterstained with hematoxylin and prepped for mounting. Tissues were washed extensively with PBST and endogenous peroxidase activity was quenched with a peroxidase suppressor.

To expose target proteins, heat induced antigen retrieval was performed using 10mM sodium citrate (pH6.0) buffer, microwaved for 8-15 minutes. Following antigen retrieval tissues were blocked in 3% BSA-PBS for 30 minutes at room temperature.

Immunocytochemistry/ Immunofluorescence - Anti-iNOS antibody (ab3523)

Immunofluorescence analysis of A549 (human lung carcinoma cell line) whole cells labelling iNOS (Left panel: green) without (control) or using ab3523 at 1/20 dilution overnight at 4°C, followed DyLight-488 conjugated secondary antibody. Counter stain: F-Actin staining with Phalloidin (red) and nuclei with DAPI (blue) is shown. Images were taken at 60X magnification.

Cells were grown on chamber slides and fixed with formaldehyde prior to staining.

Counter stain: F-Actin staining with Phalloidin (red) and nuclei with DAPI (blue) is shown. Images were taken at 60X magnification.
