製品の概要

製品名 Anti-Stathmin 1 (phospho S63) antibody [EPR1574]

製品の詳細 Rabbit monoclonal [EPR1574] to Stathmin 1 (phospho S63)

由来種 Rabbit

特異性 This antibody only detects Stathmin 1 phosphorylated on Serine 62. The antibody immunogen

> shares 86% homology with Stathmin-2, therefore it is possible that the antibody will cross-react with Stathmin-2 when phosphorylated at serine 97. This has not been assessed experimentally.

アプリケーション 適用あり: Dot blot, IHC-P, WB, IP

適用なし: Flow Cyt or ICC/IF

種交差性 交差種: Human

免疫原 Synthetic peptide. This information is proprietary to Abcam and/or its suppliers.

ポジティブ・コントロール WB: HeLa cell lysates treated with Calyculin A; IHC-P: human brain tissue. IP: HeLa.

特記事項 This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility

- Improved sensitivity and specificity

- Long-term security of supply

- Animal-free production

ターゲット情報

機能 Involved in the regulation of the microtubule (MT) filament system by destabilizing microtubules.

Prevents assembly and promotes disassembly of microtubules. Phosphorylation at Ser-16 may be required for axon formation during neurogenesis. Involved in the control of the learned and

innate fear.

組織特異性 Ubiquitous. Expression is strongest in fetal and adult brain, spinal cord, and cerebellum, followed

by thymus, bone marrow, testis, and fetal liver. Expression is intermediate in colon, ovary, placenta, uterus, and trachea, and is readily detected at substantially lower levels in all other tissues examined. Lowest expression is found in adult liver. Present in much greater abundance in cells from patients with acute leukemia of different subtypes than in normal peripheral blood lymphocytes, non-leukemic proliferating lymphoid cells, bone marrow cells, or cells from patients

with chronic lymphoid or myeloid leukemia.

配列類似性 Belongs to the stathmin family.

Contains 1 SLD (stathmin-like) domain.

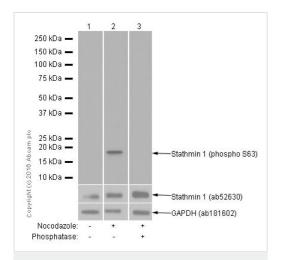

翻訳後修飾 Many different phosphorylated forms are observed depending on specific combinations among

the sites which can be phosphorylated. MAPK is responsible for the phosphorylation of stathmin in response to NGF. Phosphorylation at Ser-16 seems to be required for neuron polarization (By similarity). Phosphorylation at Ser-63 reduces tubulin binding 10-fold and suppresses the MT

polymerization inhibition activity.

細胞内局在 Cytoplasm > cytoskeleton.

Alkaline phosphatase treatment removes S63 phosphorylation. Samples treated with phosphatase were run alongside the normal lysate, and the phosph-S63 signal is not detected after phosphatase treatment, thus suggesting the signal is very specific to the phosphorylated S63.

Whole cell lysate prepared from a human colon cancer cell line was loaded at 20µg.

ab76583 used at a 1/1000 dilution.

Secondary used was an HRP conjugated goat anti-rabbit polyclonal used at a 1/10000 dilution.
