特記事項	<p>This gene is one of several Cys-Cys (CC) cytokine genes clustered on the q arm of chromosome 16. Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity for T lymphocytes, but not monocytes or granulocytes. The product of this gene binds to chemokine receptors CCR4 and CCR8. This chemokine plays important roles in T cell development in thymus as well as in trafficking and activation of mature T cells.</p> <p>The Life Science industry has been in the grips of a reproducibility crisis for a number of years. Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets your needs before purchasing.</p> <p>If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. ターゲット情報

機能

Chemotactic factor for T-lymphocytes but not monocytes or granulocytes. May play a role in T-cell development in thymus and in trafficking and activation of mature T-cells. Binds to CCR4.

組織特異性

Expressed at high levels in thymus and at low levels in the lung, colon and small intestine.

配列類似性

Belongs to the intercrine beta (chemokine CC) family.

細胞内局在

Secreted.

Lane 2 : 293T cell lysate

Lane 3 : Human cerebrum tissue lysate

Lane 4 : Mouse kidney tissue lysate

ab182793 staining TARC/CCL17 in human lung biopsy tissue sections by Immunohistochemistry (IHC-P - paraformaldehyde-fixed, paraffin-embedded sections). Tissue was fixed with paraformaldehyde and antigen retrieval was performed by heat mediation in citrate buffer, pH 6.0. Samples were incubated with primary antibody (1/2000 in PBS + 1% BSA) for 16 hours at 4°C. A Biotin-conjugated donkey anti-rabbit IgG polyclonal (1/500) was used as the secondary antibody.

TARC/CCL17 in connective tissue is revealed in brown (DAB impact). Nucleus (and Mucus) are counterstain in blue (Fastblue).

Fixative: Formalin 4% (Qpath), lungs were post-fixed (6h) before paraffin embedded in a tissue-tek® VIP6 automat.

Sections: 3µm on SuperFrost®.

Antigen retrieval step: Citrate buffer pH=6 (15 min at 95°C) in a water Bath then slide were placed in Sequenza immunostaining with Coverplate (Shandon).

Endogenous enzyme were blocked with Dual Endogenous Enzyme Block (Dako cytomation) 15min.

Extravidin-HRP was used to increase signal (1/500, 20min, RT).
